

Abdelwahab Mahmoud

Senior Software Engineer · Backend & Platform

Cairo, Egypt

☎ +201147784094 | ✉ abdelwahabahmed93@gmail.com | 🏠 www.abdelwahab.dev | 📞 abdelwahab313 | 📺 abdelwahab313

Summary

Senior software engineer, eight years in, who writes the feature and then owns the platform under it. The last two years went to a Rails translation product, its LLM engine layer, its move onto ECS Fargate, and the credits that meter it. Usually the one who finds out why production broke.

Work Experience

OnTheGoSystems

Remote (Hong Kong)

Senior Software Engineer

Dec. 2024 - Sep. 2026

- Built the Rails translation engine across Claude on Bedrock, OpenAI and Gemini: provider fallback chains, JSON repair, Langfuse tracing, and rate-limit retries for the errors responsible for 65% of review failures.
- Moved the product from a single EC2 host onto ECS Fargate, then owned that platform and its Terraform for 16 months, running the worker fleet 90% on Spot.
- Replaced ECS autoscaling with a queue-depth autoscaler on Lambda that drains workers rather than stopping them, because scale-in kills tasks abruptly and these jobs run from 30 seconds to 2 hours.
- Owned credits and billing correctness for a metered LLM product, found the 7 millisecond check-then-act race that had been silently pausing work, and replaced the scattered credit checks with one authorization architecture, written up across four ADRs.
- Traced Aurora MySQL at 100% CPU to a status broadcast whose query plan examined 7.33M rows per call; dropped the join and throttled the caller from 1,013 calls to about 100.
- Shipped an agent-driven triage platform for production exceptions, with the pass and fail call in code rather than the prompt. Replayed on past incidents, it caught three false passes.
- Wrote the ISO 27001 audit checklist and the risk profiles behind it, then built the disaster recovery and data loss prevention programs to a documented 30-minute RTO and 15-minute RPO.

Dailymealz

Riyadh, Saudi Arabia

Senior Software Engineer

Dec. 2021 - Dec. 2024

- Led a team of 5 developers in implementing a background location check-in system for the driver app, improving route efficiency.
- Collaborated with cross-functional teams to integrate third-party tools, resulting in an enhanced user experience and reduced downtime.
- Built an automated build pipeline on App Center for direct store deployment and internal testing, which reduced time to market.
- Increased system observability by adding monitors on main flows using Datadog and OpenTelemetry, which contributed to a 30% decrease in Mean Time To Resolve.
- Implemented a centralized module to track analytical events.

Nformacy

Cairo, Egypt

Full-Stack Developer

Oct. 2020 - Dec. 2021

- Led development from business requirements to deployment, including backend and frontend.
- Designed and implemented automated BDD tests using Cypress, improving test coverage.
- Migrated existing web applications to support the SaaS model which enhanced the product to be a better market fit.
- Implemented an internal calendar system for mentor availability and customer booking.
- Ensured interoperability with third-party applications (Zoom, ClickUp, calendar).
- Managed cloud infrastructure and deployment pipelines.

DevSquads

Cairo, Egypt

Software Engineer

Aug. 2018 - Oct. 2020

- Worked in a self-organizing team to build high-quality software using Extreme Programming principles.
- Developed across multiple platforms: React Native for mobile, Ruby on Rails, Java Spring for backend, and React for frontend.
- Mentored teams in adopting Extreme Programming (XP) and Agile practices, which shortened delivery cycles and reduced technical debt.

Fikr Labs

Cairo, Egypt

Software Engineer

Jan. 2018 - Aug. 2018

- Developed software using TDD with evolutionary design.
- Delivered thin vertical slices on many projects across multiple stacks: Java, React Native, React.js.
- Maintained and refactored legacy code base using automated tests which provided a safety net and enhanced quality.

Skills

Programming Languages	Ruby, JavaScript, TypeScript, Python, PHP, Java
Backend Development	Ruby on Rails, Node.js, FastAPI, Delayed Job, REST APIs, Laravel, Java Spring
Frontend Development	React, Next.js, Redux, Hotwire (Turbo & Stimulus), React Native, Tailwind CSS
AI & LLM	AWS Bedrock, OpenAI, Gemini, Claude Agent SDK, MCP, prompt versioning, evaluation harnesses
Cloud & Infrastructure	AWS (ECS Fargate, Lambda, Step Functions, CloudWatch, S3, IAM), Terraform, Docker, GitLab CI
Databases	MySQL, Aurora, PostgreSQL, DynamoDB, Redis
Testing	RSpec, Capybara, Playwright, Cypress, Jest, VCR
Spoken Languages	English, Arabic (native), German (beginner)

Education

Faculty of Science Cairo University

Bachelor of Science in Geophysics

Cairo, Egypt
Sep. 2012 - Jun. 2016

- Leveraged strong analytical skills from Geophysics to solve complex problems in software development.
